ADVANTAGES OF GEL

Increase dwell time
Visual marker for operator
Reduce water and chemical usage
Reduces labor costs

SPECIFICATIONS :

Agitating mixing propeller powered by a lube-less air motor

Kal-Rez fitted Pump for chemical compatibility

Urethane coating applied to air motor for added corrosion protection

Non-pressurized unit on our versatile 25 gallon tank design

Top View - Gel Motor

The Gel-it 25 is a non-pressurized gel unit featuring an air operated mixing propeller that mixes liquid or powder gel additives into a consistent gel. Gel is used in areas that are hard to clean where extended dwell time is preferred. Gel will cling to vertical surfaces for hours helping to loosen the baked or burned on deposits found in ovens or other application areas. This integrated portable design makes applying gel easy and affordable.
